

-DIY Bug Hotel-

Materials Needed:

- Empty tissue rolls
- Sticks, grasses, and other materials from nature
- 4 planks of wood for the size of bug hotel you wish to make (you can use an old shoe box, but this will not be water proof)
- Wood backing
- Nails
- Hammer

Instructions:

1. Create your square with the wood planks, nail together.
2. Use whatever you chose as backing to your bug hotel and nail in place on the back of your bug hotel.
3. Fill your box with materials you have found, keep it compact but not too tight. Alternate materials every couple of inches to provide different habitats for your insects.
4. There are many different types of bug hotels out there and can easily be searched online for a reference picture.
